 - [50] One optic nerve on each rat was severed. Gene expression was assessed using arrays of probes for genes as shown in <u>Table Figure</u> 9. By comparing right to left eye, genes were identified that were either up or down regulated at various times after axotomy. See <u>Tables Figures</u> 1-7.
 - [51] By comparing expression in treated and non-treated rats genes were identified whose expression was modulated relative to the control animals. These are identified in <u>Table Figures</u> 8. These genes can be used similarly to those identified in <u>Tables Figures</u> 1-7 in any of the methods of the present invention
- (5) Insert Tables 1-9 after paragraph [51].
